

Logbook: 4

Meeting No: 11

Date: 2025/12/08

Start Time: 7:20 AM

Last Visit Date: 2025/11/24

Finish Time: 8:30 AM

Items discussed:

1. Researched backend journals focusing on:
 - a. Financial attributes needed in the system
 - b. Business, marketing, and legal reasons for using these attributes
2. Analyzed **actors** for the use-case diagram:
 - a. Admin, Seller, Buyer, Delivery Partner, Finance Team, Support Team, Guest User
3. Identify different **user roles** required in the platform.

Achievements:

- Successfully created 6 research journals, each summarising important aspects of financial data, marketing attributes, legal points and analytic features relevant to the project.
- Took screenshots of the ERD diagram structures from each journal and used them to analyse their attributes.
- Completed a full Use Case documentation, including actor names, responsibilities and screenshots of reference diagrams.

Problems (if any).

- While extracting entities and attributes from multiple journals, some diagram had overlapping or unclear labels, which made the attributes mapping time-consuming.

Tasks for Next Meeting:

- Prepare the SRS (Software Requirement Specification) document, including functional and non-functional requirements.
- Work on the Use Case description and diagram for the system, covering all identified actors and system interactions.
- Design the ERD (Entity Relationship Diagram) with complete entities, attributes and relationship for the project.
